Brain Storming

1. Text Summarization

2. Generating a condensed version of a passage while preserving its meaning is known as text summarization. Tackling this task is an important step towards natural language understanding. Summarization systems can be broadly classified into two categories. *Extractive models* generate summaries by cropping important segments from the original text and putting them together to form a coherent summary. *Abstractive models* generate summaries from scratch without being constrained to reuse phrases from the original text.
3. Rush et al.: First to use neural
4. Given a sentence: make summarization
5. Sumit et al. : RNN
